Lagrange interpolation

```
\begin{split} &\text{fun}[\text{fun}\_, \text{x0}\_, \text{h}\_, \text{n}\_] := \text{Module}\big[\{\text{x1} = \{\}, \text{x}\}, \text{x} = \text{x0}; \\ &\text{Do}[\text{AppendTo}[\text{x1}, \text{x}]; \\ &\text{x} += \text{h}, \text{n} + 1]; \\ &\frac{\text{Product}\big[\big(\text{t} - \text{i} + 1\big), \{\text{i}, 1, \text{n} + 1\}\big]}{\text{n}!} \star \\ &\text{Sum}\Big[\frac{\left(-1\right)^{\text{n} - k} \text{Binomial}[\text{n}, \text{k}]}{\text{t} - \text{k}} \text{fun}[\text{x1}[\![\text{k}]\!]], \{\text{k}, 1, \text{n} + 1\}\big]\Big] \end{split}
```

Example 1

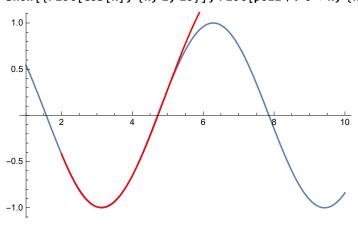

```
pol = fun[#3 &, 1, 1, 3];
Show[{Plot[k³, {k, 1, 10}],
    Plot[pol /. t → k, {k, 2, 8}, PlotStyle → Red, PlotLegends → {"interpolant"}]}]
1000
600
400
-----
interpolant
```

Example 2

200

pol1 = fun[Cos[#] &, 1, 1, 5];

 $Show[\{Plot[Cos[k], \{k, 1, 10\}], Plot[pol1 /. t \rightarrow k, \{k, 2, 8\}, PlotStyle \rightarrow Red]\}]$

pol2 = fun[Cos[#] &, 1, 1, 10];

$Show[\{Plot[Cos[k], \{k, 1, 10\}], Plot[pol2 /. t \rightarrow k, \{k, 2, 8\}, PlotStyle \rightarrow Red]\}]$
